Changing a table view

We will change the view of the organizations table, so you can see codes and sort/select them.
This table view is in a library snippet called
library/Gems/snippets/Organization/OrganizationTableSnippet.php.
Copy this snippet to the folder application/classes/[yourproject]/Snippets/Organization
(you might need to create this folder first, use the correct capitalization!).
Adjust the class name to fit in the Zend folders/classes structure:

```
class Action_Snippets_Organization_OrganizationTableSnippet extends
Gems_Snippets_ModelTableSnippetGeneric
```

There is only one function you need to overrule: the addBrowseTableColumns function.
The bridge model needs to be adapted, you will find lines like:

```
        (....)
        $bridge->addMultiSort('gor_add_respondents', $BR,
'gor_has_respondents', $BR, 'gor_respondent_group');
        $bridge->add('gor_accessible_by');
```

Add additional fields in the bridge model like this:

```
        $bridge->addMultiSort('gor_add_respondents', $BR,
'gor_has_respondents', $BR, 'gor_respondent_group');
        $bridge->addMultiSort('gor_code', $BR, 'gor_provider_id', $BR,
'gor_iso_lang');
        $bridge->add('gor_accessible_by');
```

This will add the codes to a multisort column.
