

Changing the header to organization name

If a user is logged in we will change the default header (project name) to that users' organization name.

This can be achieved in Escort.php.

We need to override the function `_layoutProjectName` that is in `library/gems/classes/escort.php`. We copy this function in our own `application/classes/[yourproject]/Escort.php`:

```
/**.....*/

class Yourproject_Escort extends GemsEscort implements
    Gems_Project_Layout_SingleLayoutInterface,
    (etc)
{

    /**
     * Function called if specified in the Project.ini layoutPrepare section
     before
     * the layout is drawn, but after the rest of the program has run it's
     course.
     *
     * @return mixed If null nothing is set, otherwise the name of
     * the function is used as Zend_View variable name.
     */
    protected function _layoutProjectName(array $args = null)
    {
        if (isset($args['tagName'])) {
            $tagName = $args['tagName'];
            unset($args['tagName']);
        } else {
            $tagName = 'h1';
        }

        //This is changed: get the userdata and set the switch
        $user = $this->getLoader()->getCurrentUser();
        if($user->hasRole('nologin')){
            //back to default if no user is logged in
            return MUtil_Html::create($tagName, $this->project->name,
            $args);
        }else{
            return MUtil_Html::create($tagName,
            $user->getCurrentOrganization()->getName(), $args);
        }
    }
}
```
