

Here some examples of track definitions and how they work:

Duim kort (xpert Clinic) Small surgery and conservative treatment of the thumb:

Track fields use link to agenda (information imported from electronic health record)

The image shows a vertical screenshot of a web application interface for GemTracker. The interface is organized into several sections. At the top, there is a header area with navigation links and a search bar. Below this is a main content area containing a list of gemstone entries. Each entry is represented by a row in a table-like structure, with columns for various attributes such as 'Name', 'Weight', 'Price', and 'Status'. The entries are separated by horizontal lines, and some rows have a grey background, possibly indicating a different status or category. The overall layout is clean and professional, typical of a data management or e-commerce application.
