

Maintenance mode

Maintenance mode is a special system mode for large scale maintenance.

Only users with a role that includes the right to turn Maintenance mode on and off are allowed access to the installation and the ability for respondents to answer surveys is turned off.

Maintenance mode is usually used for large scale track and survey maintenance. It can also be used during version upgrades, but normally these take only minutes and do not cause failures most of the time. Track maintenance with the replacement of surveys on the other hand can easily take hours when there are a lot of patients.

When maintenance mode is turned on and regularly during maintenance mode all users with the right to turn the mode on and off get e-mails to inform them of this.

Maintenance mode does not grant any users any extra rights, not does it enable any actions that one is otherwise not capable of performing. Maintenance mode disables: normal staff can no longer login and surveys can no longer be answered.
