

Changing access rights

General setup

In Gemstracker, every user is assigned to one group. One group is assigned one role. One role has a set of privileges.

There are a few predefined roles: Super, admin, staff, researcher, guest, nologin, physician, respondent, security.

Also a set of predefined groups is predefined: Super administrators, local admins, staff and respondents.

The basic level to change rights is at the roles level.

To create additional groups with customized privileges you first need to:

1. create a new role
2. create a group with this role
3. make sure the group that can create accounts has access to this new role (needs to inherit from the new role you created)

Adding roles

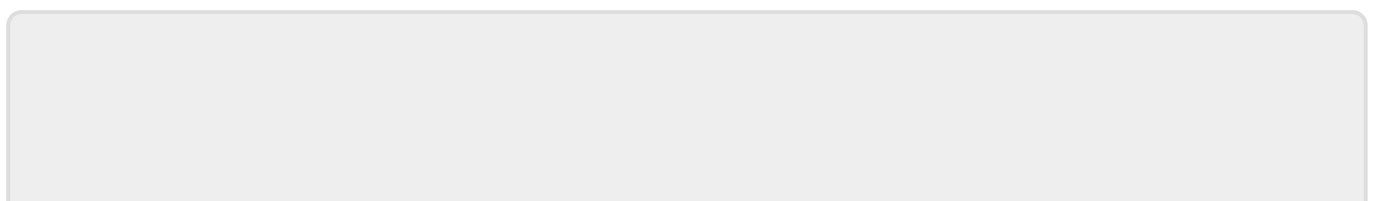

- Go to Roles under Setup - Access*
- Go to new
- Enter role name
- Select the role this group will have
- Press '**Save**'

* You can only see this tab if you have the right to access it

Adding groups

- Go to Groups under Setup - Access*
- Go to new
- Enter groupname
- Select the privileges this role will have
- Press '**Save**'

* You can only see this tab if you have the right to access it
