

E-mail

manual mail

You can manually send e-mail to one or more respondents from the Overview menu item. When you search By period, By token or By patient you can (roughly) select the patients you want to mail and then you click on the 'Bulk mail' button - assuming you have the right to do so.

In the next screen you can select and deselect individual patient and tokens to mail and you can decide what to mail by selecting a mail template or - if you have the access rights - you can write a message there and then.

semi-automatic mail

- Go to Automatic Mail under Setup ⇒ Mail
- Click New
- Select a template*
- Select a user whose name will be used for the e-mail
- Keep the check at active
- Select one of three options for the sending e-mail adres
 - Fill out a e-mail adres in 'From other' if you have selected this mode
- Select 'Send one mail per patient,mark only mailed tokens'
- Select at Filter: 'First mail'
- Change the settings for the automatic reminders
- Choose a track and/or survey for wich this template has te be sent.
- Press '**Save**'
- Repeat once for the automatic reminder, setting the filter to 'Reminder'

Based on these settings, GemsTracker wil create e-mails every time a survey becomes active for someone with a e-mail adres. These messages aren't sent until you tell GemsTracker to do so. You'll have to do this regularly.

- Go to Automatic Mail under Mail
- Go to Run
- GemsTracker wil send all the waiting messages

* See [making a mail template](#) on how to create one

automatic mail

The fully automatic e-mail works the same as the semi-automatic e-mail. The only difference is that the site-admin tells GemsTracker to automatically send the e-mail without you having to press the button. This can only be done by the server admin by using the so-called cronjob.
