Welcome to GemsTracker

(24-30 august 2012: the site is under revision, some pagelinks can be temporarily 'broken', we apologize for the inconvenience)

GemsTracker (GEneric Medical Survey Tracker) is a software package for (complex) distribution of questionnaires and forms during clinical research and quality registrations in healthcare. The software allows you to set up your own website for data collection. On a GemsTracker site different users, are able to submit, view and sent information. GemsTracker offers:

- Extensive patient/ respondent management
- Compose your own measurement track from your questionnaires and forms.
- Large number of data overviews: per patient/respondent, track, questionnaire, rounds, etc
- Multi-center functionality
- User friendly interfaces
- Elaborate rights management
- Extensive security and logging possibilities

GemsTracker is developed at the Erasmus MC, Rotterdam in collaboration with several partners.

New to GemsTracker and want to know if it is something for you?
→ *check out these general information pages.*

Using GemsTracker, and need user information?
→ *go to these user support pages.*

Are you a developer or contributor to GemsTracker?
→ *go to the developer zone.*

This documentation is a start. As it is done in a wiki **you** can help improve it!
